

SURAJ ISHWAR SULEBHAVI

| Operations Executive – CKD Export Packaging | Automotive Supply Chain & Packaging Design Engineer | CATIA Design | Python Automation | CBU Car Stuffing & Container Loading Specialist | Export Logistics | Vehicle Handling & Inspection |

Pune, Maharashtra, India | +91-8660138919 | suraj.sulebhavi.95@gmail.com | [linkedin-suraj-sulebhavi](#)

PORTFOLIO | [View My Portfolio](#)

► PROFESSIONAL SUMMARY

Results-driven Operations Executive and Packaging Design Engineer with 3.7+ years of experience in CKD (Completely Knocked Down) export packaging, supply chain management, and automotive supply chain operations. Proven track record managing end-to-end packaging processes for 1,400+ automotive parts per month across 10 CKD sets bound for export markets in Africa and Latin America. Hands-on expertise in CBU (Completely Built Unit) vehicle stuffing operations, leading the monthly loading of 200+ containers and solving the load-planning challenge of fixing 4 Maruti Suzuki Dzire vehicles into a single 40ft container - versus the 3-vehicle standard used by other logistics providers. Skilled in CATIA V5 2D/3D design, digital traceability systems (AppSheet, QR-based tracking), and self-taught Python automation (Streamlit, Pandas, Plotly) that eliminated manual reporting and improved data accuracy. Strong cross-functional coordinator with a consistent record of zero-defect dispatch, SOP compliance, and continuous process improvement.

► CORE COMPETENCIES

Operations & Supply Chain: CKD Export Packaging | Supply Chain Management | International Logistics | Export Documentation | ESR Management | Container Vanning & Load Planning | CFS Dispatch Coordination | Vendor Coordination | Cross-Functional Team Coordination & Leadership | CBU Car Stuffing & Container Loading | Vehicle Handling & Inspection

CBU Vehicle Stuffing: Container Load Planning | Multi-Vehicle 40ft Stuffing | Vehicle Orientation & Fitment | Wheel-Chocking & Lashing | Pre-Loading Vehicle Inspection | Chassis-Wise Load Records | Loading Photo Documentation

Quality & Compliance: Incoming Inspection | CFT Approvals | SOP Enforcement | CAPA & Non-Conformance Management | 5-Level Labelling Standards

CAD & Packaging Design: CATIA V5 (Part Design, Assembly, Drafting) | Solid Edge 3D Modelling | AutoCAD | Die-Cut PP Insert & Partition Box Design | IMC Box & ISO Modular Pallet Design | Packaging Standards (IS 2771, ASTM D4169)

Software & Automation: Python | Streamlit | Pandas | Plotly | fpdf2 | Dropbox API | SMTP Automation | SQLite | CadQuery | Process Automation | Data Visualization | Dashboard Development

Digital Traceability: AppSheet Workflow Design | QR-Based Pack Traceability | Automated Pack List Generation | Audit-Ready Data Capture

Web Application Development: Container Tracking Web App | Auto Container & Chassis Number Generation | Loading Photo Capture & Storage | PDF & Excel Report Export

Process Improvement: Lean Principles | Continuous Improvement | Process Optimization | Root Cause Analysis | Team Leadership & Training

► PROFESSIONAL EXPERIENCE

Operations Executive - CKD Export Packaging & CBU Vehicle Stuffing

DACO Engineering | Jan 2023 - Present (3.6 Years)

- Manage end-to-end CBU (Completely Built Unit) vehicle stuffing operations alongside CKD packaging, overseeing vehicle receiving, pre-loading inspection, container load planning, and dispatch for export-bound automotive units.
- Manage end-to-end CKD packaging operations covering 1,400+ automotive parts per month across 10 complete CKD sets for export to Africa and Latin America.
- Monitor deployed projects through operational feedback, KPI tracking, issue resolution, and continuous improvement, ensuring the implemented solution meets customer and business requirements.
- Support project deployment by coordinating manpower, equipment, packaging materials, system readiness, training, SOP implementation, and on-site process stabilization.
- Prepare and track project timelines, task ownership, material requirements, process documentation, and deployment activities to ensure projects are implemented within planned schedules.
- Coordinate project planning and execution from initial requirement gathering and feasibility review through design, trial, implementation, and final project deployment at the operating site.

- ▶ Take project inputs from customers, internal stakeholders, engineering, quality, and operations teams; convert requirements into actionable packaging, logistics, and deployment plans.
- ▶ Execute WhAP 8x8 - Tata Advance System CKD operations spanning 2,000+ parts per vehicle, from parts receiving through container stuffing at the Container Freight Station (CFS).
- ▶ Oversee the full packaging workflow - incoming inspection, CFT approval, label verification, primary and secondary packaging, master pack (ESR) build, QR label generation, and container vanning.
- ▶ Plan and coordinate 40ft High Cube container vanning (12.03m x 2.35m x 2.69m), optimizing space utilization, weight distribution, and load securing to minimize transit damage.
- ▶ Design 2D/3D packaging solutions in CATIA V5 for CKD export modules, pallets, crates, and returnable packaging systems using PP corrugated sheet, wood, metal, and hybrid materials, balancing protective performance with cost efficiency.
- ▶ Enforce a 5-level labelling and traceability standard (SKU, Box, Master Pack/ESR, Container) that maintains 100% part identification accuracy across all shipments.
- ▶ Lead visual quality inspection across metal, plastic, electrical, tyre, and structural part categories, applying protective packaging (VCI, desiccants, EPE foam, polybag sealing) matched to part type.
- ▶ Built and drive an AppSheet-based digital workflow with QR-based pack traceability at SKU, box, and ESR level, replacing paper records with real-time, audit-ready data capture.
- ▶ Coordinate a 15-member cross-functional team of packaging engineers, quality inspectors, and logistics staff, and lead CAPA initiatives and operator training that sustain a zero-damage-claim record.
- ▶ Specialize in CBU (Completely Built Unit) car stuffing and container load planning, leading the monthly loading and stuffing of 200+ containers with vehicles bound for export.
- ▶ Solved the load-planning challenge of fixing 4 Maruti Suzuki Dzire units into a single 40ft container - versus the 3-vehicle standard used by other logistics providers - through optimized vehicle orientation, wheel-chocking, and lashing techniques, achieving an industry-leading fit without compromising vehicle safety.
- ▶ Plan multi-vehicle container loads model by model using vehicle-dimension diagrams, recording vehicle model, chassis number, and discharge port for every unit loaded into each container.
- ▶ Maintain a photo-backed loading record for every vehicle against its container and chassis number, giving clients, customs, and internal stakeholders a complete visual audit trail for each dispatch.

Manufacturing Operations Intern

Sonai Enterprises, Kolhapur, Maharashtra | 2021

- ▶ Gained hands-on exposure to manufacturing processes for metal steel bushes, rubber bushings, and steel bushes, building a foundation in component quality, dimensional tolerances, and production workflow.

▶ PROJECTS & TECHNICAL BUILDS

MIS Dashboard - Real-Time Packaging Operations Intelligence System

DACO Engineering | Self-Initiated & Deployed | Sole Developer | [Click here to view the web application](#)

- ▶ Designed and deployed a real-time Streamlit MIS dashboard, self-initiated and independently built, that tracks part-wise receipt, inspection, and ESR completion status across multiple production lots and 2,000+ parts per vehicle.
- ▶ Automated daily MIS report generation and email delivery to stakeholders, eliminating roughly 1 hour of manual reporting per day and saving 20+ hours per month.
- ▶ Connected the dashboard live to Dropbox-hosted Excel files with auto-retry and validation logic, applied data-normalization rules to unify inconsistent column formats across lots, and added a configurable URL manager so non-technical staff can update data sources without touching code.
- ▶ Built dynamic, branded PDF reporting (part-wise, lot-wise, and summary) using fpdf2, and an automated SMTP email pipeline with HTML summaries and PDF attachments delivered on a fixed daily schedule.
- ▶ Developed a Streamlit-based daily operations application for two manufacturing units (metal fabrication and PP returnable packaging), featuring attendance tracking, task management, employee profiles, and WhatsApp report sharing with SQLite persistence.

Tech Stack: Python, Streamlit, Pandas, Plotly, fpdf2, Dropbox API, Outlook SMTP, openpyxl, SQLite

Container & Vehicle Loading Tracking Web Application

- ▶ Gathered project inputs from operations and dispatch users, mapped workflow requirements, and deployed the application into day-to-day loading operations with user training and process support.

DACO Engineering | Self-Initiated & Deployed | Sole Developer | [Click here to view the web application](#)

- ▶ Built a web application for end-to-end CBU vehicle loading and container tracking, replacing manual register entries with a centralized digital system accessible to the packaging and dispatch team.
- ▶ Application auto-generates container numbers and vehicle chassis numbers at the point of stuffing, eliminating manual data entry errors and ensuring unique, traceable records per shipment.
- ▶ Enables capture and storage of all vehicle loading photos against each container and chassis number, creating a complete visual audit trail for every dispatch.
- ▶ Provides one-click PDF and Excel export of loading records, container/chassis logs, and photo reports for instant sharing with clients, customs, and internal stakeholders.
- ▶ Supports multiple vehicles per container, with dropdown selection of vehicle model and discharge port and vehicle-dimension diagrams to support CBU load planning.
- ▶ Camera-based barcode/QR scanning of container numbers and live multi-user sync let the loading team work on the same records in real time.

Tech Stack: Python, Streamlit, Pandas, openpyxl, fpdf2, SQLite

▶ KEY ACHIEVEMENTS

- ▶ Sustained a zero-damage-claim shipment record across 3.6+ years of CKD export operations for OEM customers in Africa and Latin America, backed by consistent SOP, CFT, and 5-level labelling compliance.
- ▶ Self-built Python and AppSheet tooling now used daily across DACO operations, cutting manual reporting and paperwork by 20+ hours per month.
- ▶ Improved container space utilization by fitting 4 Maruti Suzuki Dzire vehicles per 40ft container against the industry-standard 3-vehicle load, a 33% capacity gain over competing logistics providers.
- ▶ Led monthly CBU stuffing of 200+ export containers while replacing manual register entries with a digital, chassis-wise loading record backed by photo evidence and one-click PDF/Excel reports.

▶ EDUCATION

B.E. - Mechanical Engineering

VSM, SRK Institute of Technology, Nippani (VTU) | 2021

Project: Contactless Disposal Machine for Mask & Super Absorbent Polymer Materials - Team Leader, selected by KSCST 44th Series & VTU

Diploma - Mechanical Engineering

N M Trust Polytechnic, Nidasoshi, Board of Technical Education | 2017

Project: Automatic Pneumatic Ramming Machine - Team Leader

▶ TECHNICAL PROFICIENCIES & LANGUAGES

Technical Proficiencies: CATIA V5 - CAD Design, Solid Edge - 3D Modelling, AutoCAD - Technical Drawing

Languages: English (Professional Proficiency), Hindi (Proficient), Marathi (Native)
